Power Screen Capture is an all-in-one screen capture application recommended by our professional engineers, it allows users to take screenshots quickly, just do it!

With **Power Screen Capture**, you can capture screen from your desktop with high quality. Besides, it offers you the function of capturing video and image from other devices, DV and TV Tuner. A list displays all captured files, you can view, copy, delete and rename these files freely and easily! Various settings let you set video compression codec, audio compression codec, output frame size and frame rate. You can also set properties of each capture device, preview and record real-time video, watch TV (TV Tuner is installed), add water mark or texts on video or image, etc.

This simple tool is designed for both professional and amateur. Experience it now!

New Features:

- Start up or stop capturing video automatically by dynamic monitoring computer voice.
- Show computer sound decibel schedule bar
- Show decibel alarm line in sound sensitivity
- Set time to startup alarm mode.
- Enumerate formats of inputting sound
- Adjustable volume of input level
- Set balance of both channels

Features Including:

- Intuitive interface that is easy to control.
- Capture video and image from DV, TV Tuner and other devices.
- Capture full screen or selected region of your desktop.
- Preview and record real-time video.
- Record video and even sound (audio device connected).
- Browse or edit captured media files.

- Set hotkey to activate screen capturing instantly.
- Set properties of capture device.
- Set multiple video and audio encoder settings.
- Adjust output settings for high quality files.
- And more...

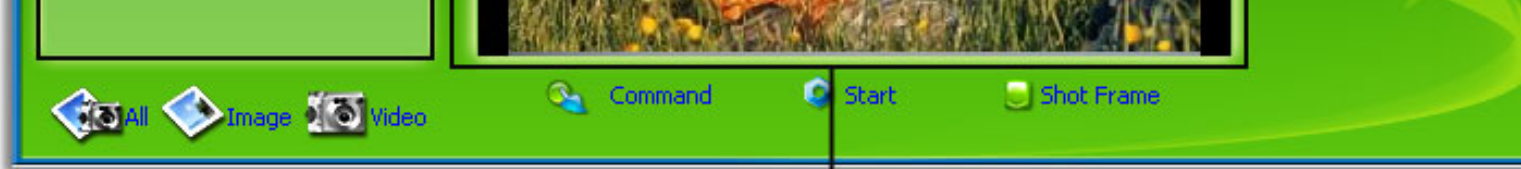

Overview

In this part, we offer a brief introduction of all buttons and windows on main window so that users can use Power Screen Capture breezily.

The screenshot shows the main window of the Power Screen Capture application. The window title is "Power Screen Capture". The interface is divided into several sections:

- 1:** The application icon in the title bar.
- 2:** The "Screen Capture" button.
- 3:** The "File Browse" button.
- 4:** The "Other Devices" button.
- 5:** The "TV Capture" button.
- 6:** The "DV Capture" button.
- 7:** The "Capture Settings" button.
- 8:** The "Device Settings" button.
- 9:** The "Settings" button.
- 10:** The "Full Screen" button.
- 11:** The "Disconnect" button.
- 13:** The file list area on the left, showing two files: "...36_394.jpg" and "...155600.avi". The second file is highlighted with a red border.

The central area displays a video preview of a young boy holding a goat in a field of yellow flowers. The address bar shows the path: "C:\Documents and Settings\Develop\My Documents\My Videos\Pc".

12

Capture from other devices

Power Screen Capture not only enables you to capture files from DV and TV tuner but also capture files from other devices, such as USB cameras.

1. Connect USB cameras to your computer.
2. Open Power Screen Capture, click "Other Devices" button on the [main window](#).
3. Click "[Device Settings](#)" button to set proper settings such as video input size and video frame rate for input video device.
4. Set proper settings for your output file by clicking "[Settings](#)" button.
5. Before capturing, click "[Capture Settings](#)" button to adjust auto shot, overlay, audio settings volume and balance, etc.
6. After you confirm all settings, click "Start" button to capture video from USB cameras.
7. Click "Short Frame" button to capture image from USB cameras.

Note: All captured files will be saved to the files list automatically.

If you want to start up or stop capturing video automatically by dynamic monitoring computer voice. The following steps can help you:

1. Tick "Motion Detection" first, and then click "[Settings](#)".
2. Click "Alarm Mode" to tick "Record Video" at the left side of the dialog.

3. Click "Sensitivity" to set related parameters. Such as the alarm line at both video and sound sensitivity and the time delay of both video and sound sensitivity.
4. Click "Apply" after finishing setting, and then click "OK" to close setting.

Attention: Start up recording video and sound automatically should satisfy four conditions. That means it will start when video and sound sensitivity are both exceed the alarm line and still both longer than time delay.

Unlike startup recording, stop recording just need one condition. That means random condition not arrive at the set parameters, recording will be stopped automatically.

Related button:

1. "Motion Detection": Tick the button to select the motion detection.
2. "[Motion Detection Settings](#)": Set functions of motion detection

The left button: Create a new folder.

The middle button: Rename the selected folder.

The right button: Delete the selected folder.
